

(a) the image you get
lung + heart, reconstructed

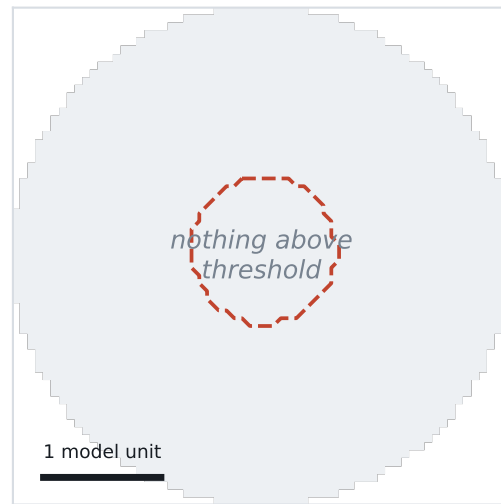

(b) threshold $\rightarrow$ lung
recovered

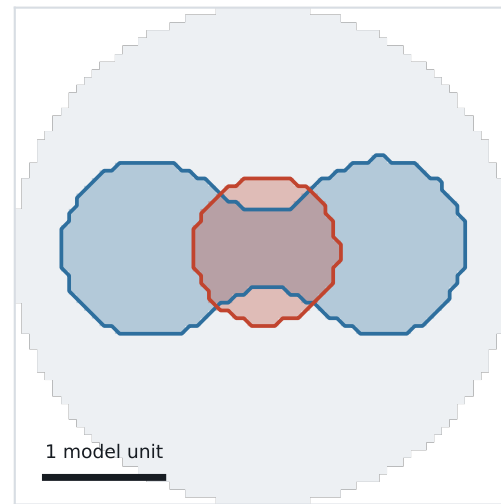

DSC 0.948

(c) same threshold $\rightarrow$ heart
not recovered

DSC 0.000

(d) what is actually there
lung and heart

the separation to be learned

Filled = recovered by thresholding the mixed image at quarter amplitude. Dashed = the organ's own reconstruction. Lungs reconstruct negative, the heart positive.
